

CasaTunes FAQ

I get a scrambled display in the CasaTunes User Interface

After installing CasaTunes successfully and starting Internet Explorer you get a screen similar to this one, where the graphics are all jumbled, it most likely is the result of the .Net Framework 2.0 being installed prior to IIS being installed. To fix this issue you will need to repair the Microsoft .Net Framework 2.0

To repair the Microsoft .Net Framework 2.0:

1. Open the control panel
2. Select 'Add or Remove Programs'
3. Select 'Microsoft .Net Framework 2.0' from the list of installed applications
4. Click on 'Change/Remove'
5. Select 'Repair' and follow the instructions

The browser should now properly display the CasaTunes UI.
