

CasaTunes® Keypads

Providing an expanded level of control, CasaTunes® Keypads are designed to seamlessly integrate with the CasaTunes multi-room music products for convenient control of your music.

Discover the convenient control solution.

CasaTunes Keypads expand listeners' level of control over the music experience. With few buttons and an easy to read graphical LCD display, these in-wall LCD keypads offer a range of menus and control options within a compact accessory. Each button provides a range of functionality depending on whether the button is pressed and released or held.

CasaTunes Keypads enable users to:

- Turn music on and off, control volume, and switch between music sources.
- Turn music on or off in all rooms.
- Select songs, advance songs, or change radio stations with the touch of a button.
- Set play options such as shuffle and repeat.
- Control the base, treble, balance, and loudness settings for the room.
- View information on the LCD about the song or radio station that is playing.
- Maintain complete control over music by locking access to the keypad through the GUI – perfect for party rooms.
- Enable or disable the “Do Not Disturb” mode for a room, so the room will not be affected by changes made in other rooms.
- Configure the keypad to control a group of rooms or use multiple keypads to control the same room.
- Create a custom message that is displayed when the keypad is not in use.

Simply install the keypads for versatile control options.

CasaTunes Keypads are an ideal control option for CasaTunes CT music Systems, and they are also compatible with all AV controllers currently supported by CasaTunes Streamers – including Russound, NuVo and Channel Vision. Requiring only Category 5 cabling and using standard wiring schemes, the keypads can be quickly and easily installed in a standard single-gang electrical box or low-voltage frame.

The CasaTunes USB Keypad Hub supports up to six keypads. A Category 5 cable from each keypad connects to the keypad hub. The hub is mounted to the wall in a single-gang electrical box or frame and then connects to the CasaTunes Music Server via a standard USB cable. All cables for the keypads and the keypad hub are concealed to maintain a clean, cable-free space. If more keypads are needed, simply add an additional hub – there is no limit to the number of hubs that can be used.

To assign the room a keypad will control, simply select the room from the list of rooms available from the keypad menus. No configuration switches are required, nor are you required to connect specific cables to specific ports.

Incorporate into existing décor

A standard screw-type faceplate is included with every CasaTunes Keypad. Available colors include almond, white, ivory, and black. Color is selected at time of order. Faceplates can be easily changed or replaced.

CasaTunes Keypad specifications
